# FCC §1.1310 &FCC & §2.1091- MAXIMUM PERMISSIBLE EXPOSURE (MPE)

#### **Product Description for Equipment under Test (EUT)**

The ZTE TRUNKING TECHNOLOGY CORPORATION's product, model number:  $PM790 \ VHF$  (FCC ID: 2AEKCPM790V) or the "EUT" in this report was a DIGITAL MOBILE RADIO which was measured approximately: 19.1 cm (L)  $\times$  17.7 cm (W)  $\times$  4.7 cm (H), rated with input voltage: DC 13.6 V.

Report No.: RSZ180224002-20

#### Antenna Information:

| Manufacturer                         | Antenna Type        | Model No.  | Length(cm) | Gain(dBi)           |
|--------------------------------------|---------------------|------------|------------|---------------------|
| Kenbotong<br>Technology Co.,<br>Ltd. | Monopole<br>Antenna | TQC-150CII | 110        | 3.5 dBi@136-174 MHz |

<sup>\*</sup>All measurement and test data in this report was gathered from production sample serial number: 1800236. (Assigned by BACL, Shenzhen). The EUT supplied by the applicant was received on 2018-02-24.

#### **Test Facility**

The Test site used by Bay Area Compliance Laboratories Corp. (Shenzhen) to collect test data is located on the 6/F., West Wing, Third Phase of Wanli Industrial Building, Shihua Road, Futian Free Trade Zone, Shenzhen, Guangdong, China.

The test site has been approved by the FCC under the KDB 974614 D01 and is listed in the FCC Public Access Link (PAL) database, FCC Registration No.: 342867, the FCC Designation No.: CN1221.

The test site has been registered with ISED Canada under ISED Canada Registration Number 3062B.

#### **Applicable Standard**

According to subpart 1.1307 (b)(1), 2.1091 systems operating under the provisions of this section shall be operated in a manner that ensures the public is not exposed to RF energy level in excess of the communication guidelines.

**Limits for Occupational/Controlled Exposure** 

| Limits for occupational/Controlled Exposure |                                     |                                     |                                     |                                |

<sup>\* =</sup> Plane-wave equivalent power density

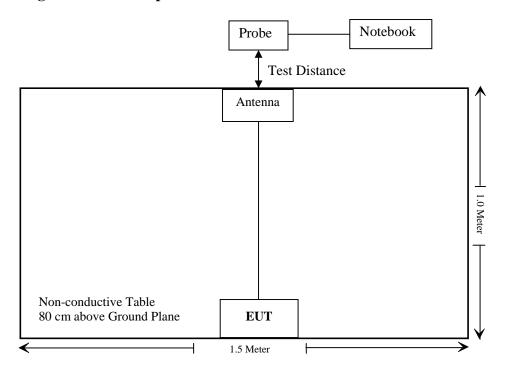

#### **Test Procedure**

- 1. Place the EUT's antenna was vertical polarization on the table.
- 2. The EUT was set to transmit at the frequency at the maximum RF power.
- 3. The distance between the test probe and the investigated EUT's antenna aqual to the distance be specified as safety distance in the user manual.
- 4. Power density measurements were taken at the different heights of the probe from the ground (0.1 to 2 meters) while rotating versus azimuth (from  $0^0$  to  $360^0$ ) the antenna.

Report No.: RSZ180224002-20

- 5. Adjusted the distance between the test probe and the tested antenna to the real safe distance,  $R_{real}$ , such that the measured highest power density in the "worst case" position was the same or slightly less than the test limit.
- 6. The measurement result of final measurements conducted at the chosen azimuth and different heights of the probe above the ground.
- 7. Average values of the power density were calculated for the imaginary whole human body (0.1-2.0 m), for the lower part of the body (01.-0.9 m) and for the upper part of the body (1.0-2.0 m).

#### **Test Result Summary**

| Maximun Power Density(mW/cm²) | 0.975 |
|-------------------------------|-------|
| Safety Distance (cm)          | 55    |
| Result                        | Pass  |

Report No.: RSZ180224002-20

For simultaneously transmit system, the calculated power density should comply with:

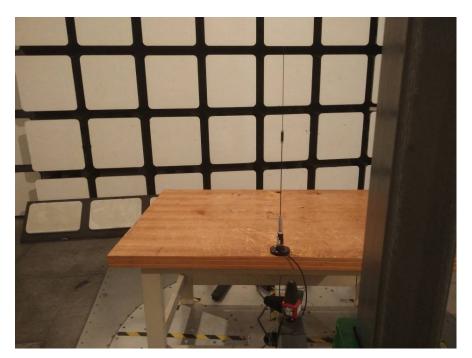

$$\sum_{i} \frac{S_{i}}{S_{Limit,i}} \leq 1$$

Simultaneous transmitting consideration: (referring to the bluetooth report, the highest MPE is  $0.0001 \text{mW/cm}^2)$ 

The ratio=MPE/limit\_{TNB}+MPE/limit\_{DTS}=0.975/1+0.0001/1=0.9751  $\!<\!1.0,$  simultaneous exposure is not required.
